[DAY 4] MINI-PROJECT | Your First Automation System

Ruthraji R V

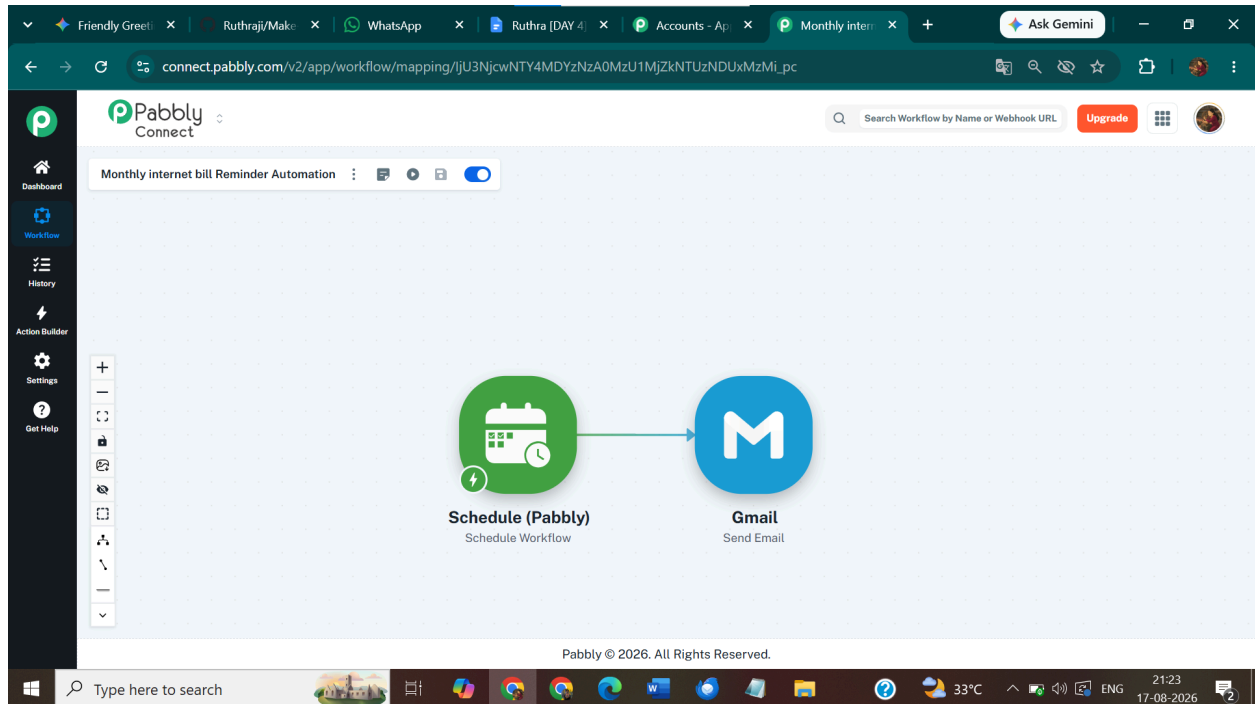

Project Overview

In this project, I built an automated reminder system using **Pabbly Connect** and **Gmail**. The objective was to schedule an automated email trigger for monthly bill payment reminders without manual intervention.

Implementation Steps:

1. **Trigger Setup:** Used Pabbly Connect's *Schedule* module to trigger at a specific date and time.
2. **Action Setup:** Integrated the *Gmail* module to construct and send the automated reminder email.
3. **Execution:** Successfully tested and verified the workflow.
