

SUCCESS SECRETS WITH ALEX

MAKE MONEY WITH AI CHALLENGE | தமிழ்

DAY 2 MINI-PROJECT | Your First Vibe Coding Experience

RUTHRAJI R V

[STEP 1] YOUR IDEA (Based on The 10X Think Like a BUILDER Blueprint™):

A simple community website that connects donors with city-wise lead volunteers. Donors can choose to help with food, clothes, or money. The assigned local volunteer in that specific town receives the items and directly hands them over to poor people on the streets.

[STEP 2] YOUR IDEA EXPANSION (From the Questionnaire):

✓ What PROBLEM(S) does your IDEA Solve?

Limited Local Reach: *Individual donors want to help, but cannot reach every street or town on their own.*

Inflexible Donation Choices: *Donors lack a single platform where they can specifically choose to give food, clothes, or money.*

Lack of Local Coordination: *No simple system exists to connect donors with verified, trustworthy volunteers in their hometowns.*

Wasted Resources: *Usable clothes and excess food go unused while street-side people lack basic necessities.*

✓ What RESULT(S) can your IDEA Achieve?

Direct Street Support: Immediate delivery of food, clothes, and funds to poor people on the streets.

Active Volunteer Network: A structured team of city-lead volunteers coordinating care across multiple towns.

Reduced Waste: Quick redistribution of unused household items and surplus food straight to the needy.

Fast Delivery: Direct transfer without middlemen, ensuring donations reach people without delay.

✓ What VALUE(S) can your IDEA Generate?

Donor Empowerment: Freedom for contributors to choose exactly how they want to help.

Community Unity: Encourages local social responsibility to take care of one's own town.

Trust & Transparency: Clear local handovers ensure donations directly impact real people in the area.

Easy Scalability: A low-cost, community-driven web model that can easily expand to any new city.

[STEP 3] YOUR PROMPT (From the Questionnaire):

ACTION -> ACT as the best JavaScript Coder in the world and write the code using the details below that I can execute in an Online Compiler or browser console.

PURPOSE -> We are going to build a "Local Care Network" system to manage donor contributions (Food, Clothes, Money) and connect them with local city volunteers to support poor people in their area.

INPUT -> Takes input from the user/console including User Type (Donor or Volunteer), Name, City, and Contribution Type (Food, Clothes, or Money for Donors).

OUTPUT -> Displays a summary of the registered user, maps the donor's contribution to the correct city's lead volunteer, and displays the total counter of donations collected and active volunteers.

[STEP 4] YOUR CODE's SCREENSHOTS:

```
Programiz JavaScript Online Compiler
main.js
// -----
// LOCAL CARE NETWORK
// Donor & Volunteer Management System
// -----

// City-wise lead volunteers
const cityVolunteers = {
  Chennai: {
    name: "Arun Kumar",
    active: true
  },
  Bangalore: {
    name: "Priya Sharma",
    active: true
  },
  Mumbai: {
    name: "Rahul Mehta",
    active: true
  },
  Delhi: {
    name: "Sneha Verma",
    active: true
  },
  Hyderabad: {
    name: "Vikram Reddy",
    active: true
  }
};

// Donation counters
const donationCounter = {
  Food: 0,
```

```
Programiz JavaScript Online Compiler
main.js
31 const donationCounter = {
32   Clothes: 0,
33   Money: 0
34 };
35
36
37 // Registered users
38 const registeredUsers = [];
39
40 // -----
41 // Helper function: Get valid input
42 // -----
43 function getInput(message) {
44   let value;
45
46   while (!value || value.trim() === "") {
47     value = prompt(message);
48
49     if (value === null) {
50       alert("Operation cancelled.");
51       throw new Error("User cancelled the operation.");
52     }
53   }
54
55   return value.trim();
56 }
57
58 // -----
59 // Register a user
60 // -----
61 function registerUser() {
62
63   console.log("=====");
```

```
Programiz JavaScript Online Compiler

main.js

61 function registerUser() {
62     // -----
63     console.log("LOCAL CARE NETWORK");
64     console.log("-----");
65
66     const userType = getInput(
67         "Enter User Type (Donor / Volunteer):"
68     ).toLowerCase();
69
70     if (userType !== "donor" && userType !== "volunteer") {
71         console.error("Invalid User Type. Please enter Donor or Volunteer.");
72         return;
73     }
74
75     const name = getInput("Enter your Name:");
76     const cityInput = getInput(
77         "Enter your City (Chennai, Bangalore, Mumbai, Delhi, Hyderabad):"
78     );
79
80     // Match city without worrying about capitalization
81     const cityKey = Object.keys(cityVolunteers).find(
82         city => city.toLowerCase() === cityInput.toLowerCase()
83     );
84
85     if (!cityKey) {
86         console.error(
87             "Sorry, this city is not currently supported by the Local Care Network."
88         );
89         return;
90     }
91
92     let contributionType = null;
93
94 }
```

```
Build the coding confidence you need to become a developer companies will fight for

Programiz JavaScript Online Compiler

main.js

```

[STEP 5] YOUR CODE EXECUTION's SCREENSHOTS:

```
Output

=====
LOCAL CARE NETWORK
=====
Enter User Type (Donor / Volunteer):Donor
Enter your Name:Ruthra
Enter your City (Chennai, Bangalore, Mumbai, Delhi, Hyderabad):Chennai
Enter Contribution Type (Food / Clothes / Money):Food

=====
REGISTRATION SUCCESSFUL
=====
User ID: 1
User Type: Donor
Name: Ruthra
City: Chennai
Contribution: Food
```

Output

City: Chennai

Contribution: Food

DONATION MAPPING

Food donation from Ruthra
has been mapped to Lead Volunteer: Arun Kumar
City: Chennai

NETWORK STATISTICS

Food Donations: 1
Clothes Donations: 0
Money Donations: 0

Output

LOCAL CARE NETWORK

Enter User Type (Donor / Volunteer):Volunteer
Enter your Name:Ramya
Enter your City (Chennai, Bangalore, Mumbai, Delhi, Hyderabad):Mumbai

REGISTRATION SUCCESSFUL

User ID: 1
User Type: Volunteer
Name: Ramya
City: Mumbai

Volunteer successfully registered.

NETWORK STATISTICS

Food Donations: 0
Clothes Donations: 0
Money Donations: 0
